250 illustrations and charts, size 8.25 x 10.75 inches. In 1945, after
the war had ended, BSA resumed production of their civilian line of
motorcycles. However, they continued their pre-war practice of
publishing repair, overhaul and technical information in the form
of individual 'Service Sheets'. These sheets were 'dealer only'
publications and, as such, the print quality was at times somewhat
questionable. It was not until the early 1960's that BSA eventually
started publishing model specific workshop manuals that were
available to the general public. Consequently, these 'Service Sheets'
were the only publications available for the maintenance and repair
of BSA models that were manufactured through the early 1960's. At
some point in the 1930's, BSA adopted the practice of identifying
their various model types by 'groups' and the models manufactured
from 1945 through the mid 1960's were in Groups A, B, C, D and
M. The service sheets that were associated to a particular group were
identified numerically and, while there were some exceptions due to
overlapping data between models, in general terms the numbers*

relate to a particular model group. They are as follows: The 200 series of service sheets were applicable to Group A models, the 300 series to Group B, the 400 series to Group C, the 500 series to Group D and the 600 series to Group M. In addition, there were a 700 series applicable to mechanical maintenance and an 800 series for electronic service and wiring diagrams. Both the 700 and 800 series of service sheets contained information that was not model specific but was applicable across multiple model groups. Unfortunately, as these service sheets were issued individually and at random times, the numbering sequence within any group is, at times, illogical and not necessarily consecutive. Consequently, assembling those individual sheets into a publication that serves as a model specific workshop manual is a somewhat difficult task and owners of BSA motor cycles are subjected to considerable confusion surrounding the appropriate selection from the multitude of reprints that have recently flooded the on-line marketplace. Many of the reprints found on internet websites are from 'bedroom sellers' at enticingly low prices by individuals that really have no idea what they are selling. Many are nothing more than poor quality comb-bound photocopies that are scanned and printed complete with greasy pages and thumbprints and, as such, are deceptively described as 'pre-owned', 'used' or even 'refurbished'! In addition, they are often advertised for the incorrect series and/or model years of motorcycles. The most complete compilation of the 1945 and onwards service sheets was issued by BSA in the form of a 'dealer only' ring binder that contained all of the individual service sheets totaling to almost 500 pages, it is extremely scarce and difficult to find. This manual contains 63 service sheets (210 pages) extracted from that 'dealer only' publication, which cover the pre-unit 1945 to 1958 rigid and spring frame C10, C10L, C11, C11G and the 1956 to

1958 swing arm C12. Obviously, as the C10 was introduced in 1938 this manual will also be of use to owners of those earlier models. Please note that service sheets other than those in the 400 series that are included in this publication may also contain data that is applicable to 'other' model groups, as that was the original intention. *The Ford FE (Ford Edsel) engine is one of the most popular engines Ford ever produced, and it powered most Ford and Mercury cars and trucks from the late 1950s to the mid-1970s. For many of the later years, FE engines were used primarily in truck applications. However, the FE engine is experiencing a renaissance; it is now popular in high-performance street, strip, muscle cars, and even high-performance trucks. While high-performance build-up principles and techniques are discussed for all engines, author Barry Rabortnick focuses on the max-performance build-up for the most popular engines: the 390 and 428. With the high-performance revival for FE engines, a variety of builds are being performed from stock blocks with mild head and cam work to complete aftermarket engines with aluminum blocks, high-flow heads, and aggressive roller cams. *How to Build Max-Performance Ford FE Engines* shows you how to select the ideal pistons, connecting rods, and crankshafts to achieve horsepower requirements for all applications. The chapter on blocks discusses the strengths and weaknesses of each particular block considered. The book also examines head, valvetrain, and cam options that are best suited for individual performance goals. Also*

covered are the best-flowing heads, rocker-arm options, lifters, and pushrods. In addition, this volume covers port sizing, cam lift, and the best rocker-arm geometry. The FE engines are an excellent platform for stroking, and this book provides an insightful, easy-to-follow approach for selecting the right crank, connecting rods, pistons, and making the necessary block modifications. This is the book that Ford FE fans have been looking for. Haynes disassembles every subject vehicle and documents every step with thorough instructions and clear photos. Haynes repair manuals are used by the pros, but written for the do-it-yourselfer. 140 pages, and more than 140 illustrations and charts, size 8.25 x 10.75 inches. The original Norton factory "Twin Cylinder" workshop manual contained maintenance and repair data for both the lightweight and heavyweight Norton twins manufactured between 1960 and 1968, including the 750cc Atlas model, which was in production from 1962-1968. As many of the mechanical attributes from the Atlas series were carried over into the early Norton Commando models, we felt that the original "Twin Cylinder" manual was somewhat lacking as it did not include repair data for the early Commando that evolved from the Atlas. Consequently, we have updated and expanded this Floyd Clymer edition of the original "Twin Cylinder" manual to include the OEM Norton manual (part no. 06-3062) for the 1968-1970 Commando 750cc models that were fitted with the Atlas style exhaust and external rev-counter drive to the timing cover (Beginning with engine no. 126125 - February 1968) and the early camshaft driven contact breaker models (from engine no. 131257 - March 1969). While there is some duplication between the Atlas and Commando repair information, we felt that the Commando manual should be included in its entirety in order to 'complete' the coverage of the original "Twin Cylinder" manual from 1960 through the

1970 model year. It should also be noted that this manual includes significant maintenance and repair information for the AMC Norton/Matchless G15 hybrids that were manufactured from 1963-1967, engine numbers 107388 to 124371. IMPORTANT NOTE: Many of the reprints found on internet websites are from 'bedroom sellers' at enticingly low prices by individuals that really have no idea what they are selling. Many are nothing more than poor quality comb bound photocopies that are scanned and published complete with greasy pages and thumbprints and, as such, are deceptively described as 'pre-owned'. In addition, they are often advertised for the incorrect series and/or model years of motorcycles. However, VelocePress.com has been publishing licensed reprints of motorcycle and automobile manuals since 2003 and our publications have earned excellent reviews worldwide so you can be assured you are purchasing a quality product. We are pleased to offer this combined reprint of the Factory "Twin Cylinder" and "Commando" (06-3062) Workshop manuals. Models covered are: Lightweight Models: Jubilee 250cc (1960-1966) Navigator 350cc (1961-1965) Electra 400cc (1963-1965). Heavyweight Models: Model 88 500cc (1960-1966) Model 99 600cc (1960-1962) 650SS 650cc (1962-1968) Atlas 750cc (1962-1968) G15 750cc (1963-1967 AMC Norton/Matchless Hybrid) Commando 750cc (1968-1970 models only) IMPORTANT: Please note that the 750cc Commando manual is only applicable to the 1968-1970 models. Owners of later Commando models are directed to our 1970-1975 manual (ISBN 9781588502438) and MKIII owners to our 1975-1978 manual (ISBN 9781588502445).
