**Explore Texas** Jul 12 2022 If you are interested in birdwatching, wildlife viewing, or stargazing; flowers, geology, or water; nature centers, festivals, or photography, a destination in Texas awaits you. From the desert gardens of Big Bend to hawk watching on the Gulf Coast to caving and bat watching in the Hill Country, nature-oriented travel in Texas also includes lesser known getaways. Organized by the seven official state travel regions, Explore Texas features descriptions of almost one hundred nature-oriented sites, including information about the best time to visit and why it's worth going; location, and other logistics; and a "learn" section on the observations and natural phenomena a visitor might expect to experience. Photographs by professional photographer Jeff Parker accompany the accounts, and handy color-coded icons help guide readers to the activities of their choice. Perfect for planning the family's next outing or vacation, this book also contains a message of how nature tourism helps to protect biodiversity, promote conservation, and sustain the state's tourism economy.

The Tiger and the Pangolin May 18 2020 This original and wide-ranging work examines historical perceptions of nature in China and the relationship between insider and outsider, state and village, top-down conservation policy and community autonomy. After an introduction to the history of wildlife conservation and nature reserve management in China, the book places recent tiger conservation efforts in the context of a two-thousand-year gazetteer of tiger attacks--the longest running documentation of human-wildlife encounters for any region in the world. This record offers a unique perspective on the history of the tiger as a dynamic force in the political culture of China. While the tiger has long been identified with political authority, the Chinese pangolin and its earthly magic have exerted a powerful influence in the everyday lives of those working and living in the fields and forests. Today the tiger and the pangolin, government officials and village communities, must work together closely if wildlife habitat conservation programs are to succeed. Extensive fieldwork in the Meihuashan Nature Reserve and other protected areas of western Fujian have led the author to advocate a landscape ecological approach to habitat conservation. By linking economic development to land use practices, he makes a strong case for integrating nature conservation efforts with land tenure and other socio-ecological issues in China and beyond.

*Working from Within* Aug 21 2020 During the past few decades, a radical shift has occurred in how philosophers conceive of the relation between science and philosophy. A great number of analytic philosophers have adopted what is commonly called a "naturalistic" approach, arguing that their inquiries ought to be in some sense continuous with science. Where early analytic philosophers often relied on a sharp distinction between science and philosophy--the former an empirical discipline concerned with fact, the latter an a priori discipline concerned with meaning--philosophers today largely follow Willard Van Orman Quine (1908-2000) in his seminal rejection of this distinction. Sander Verhaegh here offers a comprehensive study of Quine's groundbreaking naturalism. Building on Quine's published corpus as well as a wealth of unpublished letters, notes, lectures, papers, proposals, and annotations from the Quine archives, Verhaegh aims to reconstruct both the nature and the development of his naturalism. As such, *Working from Within* aims to contribute to the rapidly developing historiography of analytic philosophy, and to provide a better, historically informed, understanding of what is philosophically at stake in the contemporary naturalistic turn. Transcriptions of five unpublished papers, letters, and notes are included in the appendix.

**What Nature Does For Britain** Mar 16 2020 From the peat bogs and woodlands that help to secure our water supply, to the bees and soils that produce most of the food we eat, Britain is rich in 'natural capital'. Yet we take supplies of clean water and secure food for

granted, rarely considering the free work nature does for Britain. In fact for years we have damaged the systems that sustain us under the illusion that we are keeping prices down, through intensive farming, drainage of bogs, clearing forests and turning rivers into canals. As Tony Juniper's new analysis shows, however, the ways in which we meet our needs often doesn't make economic sense. Through vivid first hand accounts and inspirational examples of how the damage is being repaired, Juniper takes readers on a journey to a different Britain from the one many assume we inhabit, not a country where nature is worthless or an impediment to progress, but the real Britain, the one where we are supported by nature, wildlife and natural systems at almost every turn.

**Working With Angels, Fairies And Nature Spirits** Dec 05 2021 In **WORKING WITH ANGELS, FAIRIES AND NATURE SPIRITS**, bestselling author and teacher Dr William Bloom presents reveals a world that lies behind everyday reality and shows you how to co-operate with these invisible beings of energy who are a fundamental part of every aspect of our lives. Learn: \*How to sense angels and spirits and communicate with them \*How to co-operate with this inner world for inspiration and guidance \*How to work with angels for healing and spiritual growth \*How they can help you fulfil yourself and help others \*How they can bring you a deeper understanding of all aspects of life.

**Nature-Based Therapy** Apr 16 2020 Take advantage of nature's therapeutic benefits with this guide for counselors, therapists, and educators who work with children, youth, and

families. The number of people seeking help for a wide range of mental health concerns is growing at an alarming rate. Unplugging from technology and reconnecting with the web of life is a powerful antidote to the anxiety and stress that tend to exacerbate so many of our mental health struggles. Nature-Based Therapy addresses the underlying disconnection between humans and their ecological home, exploring theories and therapeutic practices designed for children, youth, and families, including: Developing sensory awareness of outer and inner landscapes Navigating risk in play Case examples with a diverse range of settings, intentions, and interventions

**Place of Healing** Feb 24 2021 In this companion volume to *Mortally Wounded: Stories of Soul Pain, Death, and Healing* palliative care specialist Dr. Michael Kearney demonstrates that while the medical model has undoubted strengths in easing pain, it is limited in its ability to alleviate the psychological and spiritual suffering that often accompanies terminal illness. Complementing physical treatment with such depth approaches as dream-work, poetry, divination, and a revitalised connection with nature, Kearney allows us to begin to integrate scientific and psychological metaphors. Through research and imaginative reconstructions of the mythology and rites of ancient Greek Asklepiian healing, Kearney helps us envision a way of recognising and caring for the soul in its most critical moments. He offers suggestions for workshop activities along with case histories from his own experience. He concludes by proposing a new model for the healing of suffering which

draws on the best practices of both the medical and Asklepiian traditions.

**Creating a Forest Garden** Feb 07 2022 Forest Gardening (or agroforestry) is a way of growing edible crops with nature doing most of the work. A forest garden imitates young natural woodland, with a wide range of crops grown in vertical layers. Species are chosen for their beneficial effects on each other, creating a healthy system that maintains its own fertility, with little need for digging, weeding or pest control. The result of this largely perennial planting is a tranquil, beautiful and productive space. This book is a bible for permaculture and forest gardening, with practical advice on how to create a forest garden, from planning and design to planting and maintenance. It explains how a forest garden is designed from the top down: the canopy layer first, then the shrub layer, the perennial ground-cover layer, the annuals & biennials next, the climbers and nitrogen fixers and finally the clearings, living spaces and paths. Whether in a small back garden or in a larger plot, the environmental benefits of growing this way are great. Forest Gardens are a viable solution to the challenge of a changing climate: we can grow food sustainably in them without compromising soil health, food quality or biodiversity. Forest gardens: store carbon dioxide in the soil and in the woody biomass of the trees and shrubs. enable the soil to store more water after heavy rains, minimizing flooding and erosion. boost the health of the ecosystem, ensuring a balance of predators and beneficial insects because mixed planting is crucial to the scheme. allows the soil to thrive because it is covered with plants all year

round. Creating a Forest Garden includes a detailed directory of over 500 trees, shrubs, herbaceous perennials, annuals, root crops and climbers. As well as more familiar plants such as fig and apple trees, blackcurrants and rosemary shrubs, you can grow your own chokeberries, goji berries, yams, heartnuts, bamboo shoots and buffalo currants. Forest gardens produce fruits, nuts, vegetables, seeds, salads, herbs, spices, firewood, mushrooms, medicinal herbs, dye plants, soap plants, and honey from bees. This book tells you everything you need to create your own forest garden with beautiful illustrations and helpful tips throughout.

**Nature as Teacher – New Principles in the Working of Nature** Aug 13 2022 Today we are standing helpless and perplexed. With no glimmer of improvement anywhere in sight, we feel hopelessly propelled towards a forlorn future. It is understandable therefore that an increasing number of people, sick and tired of this insane activity, are now seeking ways to return to Mother Nature. Viktor Schauberger (1885–1958) *Nature as Teacher*, the second volume of the Eco-Technology series which presents the original, passionate and convincing research of Viktor Schauberger in translation for the first time, looks at the ways in which we can return to the vital natural cycles that have been interrupted by modern

unthinking technologies. Schauberger was a pioneering genius who combined keen observation of Nature with intuitive brilliance and a sharp engineer's brain. One of the first genuine environmentalists, he was predicting ecological catastrophe in the 1930s when no one else could see it coming. Schauberger's predictions are now being proven right. He foresaw: Global warming and its devastating consequences Increasing violence and lawlessness as the direct result of destructive methods which block Nature's energies and balance. The destruction of the world's forests and ecosystems. A fearless exponent of natural energy who revelled in doing battle with contemporary orthodox scientists, his work is enjoying a worldwide revival because he was able to convey how an understanding of Nature's subtle energies is essential to our survival. This, and the fact that he developed free energy machines by harnessing the magical processes of Nature, has made Viktor Schauberger truly a man of our times. Following the success of *The Water Wizard*, *Nature as Teacher* details Schauberger's thinking about environmental catastrophe. It includes correspondence with contemporaries and, in particular, his feelings of frustration at the blindness of those in mainstream science who seemed to him to be more concerned with their own welfare and their pride than with the fate of humanity. This volume gives tremendous insight into what is happening on the Earth today and presents practical solutions on how we may yet save our precious world. Most telling is Schauberger's elucidation of the vital natural cycles that modern unthinking technologies have interrupted

and harmed, sometimes irreparably. The Eco-Technology series makes available for the first time Viktor Schaubberger's original writings and passionate debates. Callum Coats has painstakingly collected, translated and edited the material for what promises to be the most definitive study yet of this extraordinary man's life and work. **Green Growth That Works** Apr 09 2022 Rapid economic development has been a boon to human well-being, but comes at a significant cost to the fertile soils, forests, coastal marshes, and farmland that support all life on earth. If ecosystems collapse, so eventually will human civilization. One solution is inclusive green growth--the efficient use of natural resources. Its genius lies in working with nature rather than against it. Green Growth That Works is the first practical guide to bring together pragmatic finance and policy tools that can make investment in natural capital both attractive and commonplace. Pioneered by leading scholars from the Natural Capital Project, this valuable compendium of proven techniques can guide agencies and organizations eager to make green growth work anywhere in the world.

**Ways to Live in Harmony with Nature** Apr 28 2021 Have you ever wondered how you can maintain your current lifestyle, but not exhaust our planet's resources? In modern times, many of us have environmental knowledge but we lack an understanding of how to apply that knowledge to our everyday lives. Bridging this gap is what has motivated ecological economist Dr Kamaljit Sangha to write this book. Dr Sangha examines how people can make a difference to the environment by proposing little actions at the household scale that can contribute towards saving our planet. This book examines how to:- Minimise the gap between scientific knowledge and public awareness- Reduce the impact of our actions on our natural environment- Maintain our earth's natural resources- Be happier and healthier by recognising our reliance on Mother Nature and re-establishing our connections with nature. Dr Sangha believes there are a few, very easy steps that everyone - whether they reside in the city or the country - can take to save money, their mental and physical health, and ultimately our planet.

Working Equal Dec 13 2019 Working Equal exposes the myth of heroic individualism that is central to contemporary western thought. With more than 35% of full-time faculty with a spouse or partner in the same profession, dual career couples are a growing presence in higher education in the U.S.. This compelling and innovative volume examines and testifies

to the contribution of intimate and familial relationships to artistic, literary, and scientific accomplishment. An original study of a growing phenomena in higher education, *Working Equal* presents a new and invaluable portrait of contemporary faculty life.

*Working with Nature against Poverty* Sep 14 2022 With its low incomes, lagging social indicators and widespread poverty, eastern Indonesia epitomizes the problems of development in Indonesia. The challenge is to advance the economy. But this means more intensive use of natural resources, placing pressure on the region's unique ecosystems. This book explores the trade-offs and synergies between development, social concerns and the environment in Papua, Maluku and East Nusa Tenggara. It is written by leading scholars and experts on the region. They investigate the dilemmas of fishing in eastern Indonesia's seas, the strategies and challenges for mining and forestry, and the efforts to tackle biodiversity conservation and climate change. The book lays out the challenges for development, public administration and public health in Papua. It maps Maluku's road to recovery from conflict. And it examines ways to alleviate poverty in the desperately poor province of East Nusa Tenggara. The book provides an overview of the economy of each of these provinces, making it an essential resource for anyone interested in the challenges of development and environment in eastern Indonesia.

**Urban Green** Sep 02 2021 In early twentieth-century America, affluent city-dwellers made a habit of venturing out of doors and vacationing in resorts and national parks. Yet the rich

and the privileged were not the only ones who sought respite in nature. In this pathbreaking book, historian Colin Fisher demonstrates that working-class white immigrants and African Americans in rapidly industrializing Chicago also fled the urban environment during their scarce leisure time. If they had the means, they traveled to wilderness parks just past the city limits as well as to rural resorts in Wisconsin and Michigan. But lacking time and money, they most often sought out nature within the city itself--at urban parks and commercial groves, along the Lake Michigan shore, even in vacant lots. Chicagoans enjoyed a variety of outdoor recreational activities in these green spaces, and they used them to forge ethnic and working-class community. While narrating a crucial era in the history of Chicago's urban development, Fisher makes important interventions in debates about working-class leisure, the history of urban parks, environmental justice, the African American experience, immigration history, and the cultural history of nature.

*How Nature Works* Oct 23 2020 Self-organized criticality, the spontaneous development of systems to a critical state, is the first general theory of complex systems with a firm mathematical basis. This theory describes how many seemingly desperate aspects of the world, from stock market crashes to mass extinctions, avalanches to solar flares, all share a set of simple, easily described properties. "...a'must read'...Bak writes with such ease and lucidity, and his ideas are so intriguing...essential reading for those interested in complex systems...it will reward a sufficiently skeptical reader." -NATURE "...presents the theory

(self-organized criticality) in a form easily absorbed by the non-mathematically inclined reader." -BOSTON BOOK REVIEW "I picture Bak as a kind of scientific musketeer; flamboyant, touchy, full of swagger and ready to join every fray... His book is written with panache. The style is brisk, the content stimulating. I recommend it as a bracing experience." -NEW SCIENTIST

**Sustainability and the Rights of Nature in Practice** Oct 03 2021 Sustainability and the Rights of Nature in Practice is the much-needed complementary volume to Sustainability and the Rights of Nature: An Introduction (CRC Press, May 2017). The first book laid out the international precursors for the Rights of Nature doctrine and described the changes required to create a Rights of Nature framework that supports Nature in a sustainable relationship rather than as an exploited resource. This follow-up work provides practitioners from diverse cultures around the world an opportunity to describe their own projects, successes, and challenges in moving toward a legal personhood for Nature. It includes contributions from Nepal, New Zealand, Canadian Native American cultures, Kiribati, the United States and Scotland, amongst others, by practitioners working on projects that can be integrated into a Rights of Nature framework. The authors also tackle required changes to shift the paradigm, such as thinking of Nature in a sacred manner, reorienting Nature's rights and human rights, the conceptualization of restoration, and the removal of large-scale

energy infrastructure. Curated by experts in the field, this expansive collection of papers will prove invaluable to a wide array of policymakers and administrators, environmental advocates and conservation groups, tribal land managers, and communities seeking to create or maintain a sustainable relationship with Nature. Features: Addresses existing projects that are successfully implementing a Rights of Nature legal framework, including the difference it makes in practice Presents the voices of practitioners not often recognized who are working in innovative ways towards sustainability and the need to grant a voice to Nature in human decision-making Explores new ideas from the insights of a diverse range of cultures on how to grant legal personhood to Nature, restrain damaging human activity, create true sustainability, and glimpse how a Rights of Nature paradigm can work in different societies Details the potential pitfalls to Rights of Nature governance and land use decisions from people doing the work, as well as their solutions Discusses the basic human needs for shelter, food, and community in entirely new ways: in relationship with Nature, rather than in conquest of it

Working with Nature Feb 19 2023 From cocoa farming in Ghana to the orchards of Kent and the desert badlands of Pakistan, taking a practical approach to sustaining the landscape can mean the difference between prosperity and ruin. Working with Nature is the story of a lifetime of work, often in extreme environments, to harvest nature and protect it - in effect, gardening on a global scale. It is also a memoir of encounters with larger-than-life

characters such as William Bunting, the gun-toting saviour of Yorkshire's peatlands and the aristocratic gardener Vita Sackville-West, examining their idiosyncratic approaches to conservation. Jeremy Purseglove explains clearly and convincingly why it's not a good idea to extract as many resources as possible, whether it's the demand for palm oil currently denuding the forests of Borneo, cottonfield irrigation draining the Aral Sea, or monocrops spreading across Britain. The pioneer of engineering projects to preserve nature and landscape, first in Britain and then around the world, he offers fresh insights and solutions at each step.

*Nature Spirits & Elemental Beings* Jun 30 2021 Based on firsthand practical experiences of communicating with natural spirits through meditation, this eye-opening guide to healing the earth teaches how to work with elemental beings by describing each in detail while defining their roles within the web of life. As a result of tuning in to plants, trees, and animals, and illustrating the disrupted flow of energies within the landscape, the true impact of human culture upon the harmony of the natural world is evocatively revealed. Insight into related topics, such as how the long-suppressed Goddess culture embraces these energies to make strides toward healing the earth, can set anyone with earth and landscape concerns—gardeners, growers, designers, and builders—one step closer toward becoming environmental warriors.

Soil Science for Gardeners Nov 04 2021 Build healthy soil and grow better plants Robert

Pavlis, a gardener for over four decades, debunks common soil myths, explores the rhizosphere, and provides a personalized soil fertility improvement program in this three-part popular science guidebook. Healthy soil means thriving plants. Yet untangling the soil food web and optimizing your soil health is beyond most gardeners, many of whom lack an in-depth knowledge of the soil ecosystem. *Soil Science for Gardeners* is an accessible, science-based guide to understanding soil fertility and, in particular, the rhizosphere – the thin layer of liquid and soil surrounding plant roots, so vital to plant health. Coverage includes: Soil biology and chemistry and how plants and soil interact Common soil health problems, including analyzing soil's fertility and plant nutrients The creation of a personalized plan for improving your soil fertility, including setting priorities and goals in a cost-effective, realistic time frame. Creating the optimal conditions for nature to do the heavy lifting of building soil fertility Written for the home gardener, market gardener, and micro-farmer, *Soil Science for Gardeners* is packed with information to help you grow thriving plants.

*The Reindeer Chronicles* Jun 11 2022 In a time of uncertainty about our environmental future—an eye-opening global tour of some of the most wounded places on earth, and stories of how a passionate group of eco-restorers is leading the way to their revitalization. Award-winning science journalist Judith D. Schwartz takes us first to China's Loess

Plateau, where a landmark project has successfully restored a blighted region the size of Belgium, lifting millions of people out of poverty. She journeys on to Norway, where a young indigenous reindeer herder challenges the most powerful orthodoxies of conservation—and his own government. And in the Middle East, she follows the visionary work of an ambitious young American as he attempts to re-engineer the desert ecosystem, using plants as his most sophisticated technology. Schwartz explores regenerative solutions across a range of landscapes: deserts, grasslands, tropics, tundra, Mediterranean. She also highlights various human landscapes, the legacy of colonialism and industrial agriculture, and the endurance of indigenous knowledge. *The Reindeer Chronicles* demonstrates how solutions to seemingly intractable problems can come from the unlikeliest of places, and how the restoration of local water, carbon, nutrient, and energy cycles can play a dramatic role in stabilizing the global climate. Ultimately, it reveals how much is in our hands if we can find a way to work together and follow nature's lead.

### **Working With Nature-Based Solutions** Oct 15 2022

<https://pub.norden.org/temanord2022-562/> The world is currently facing a biodiversity and climate crisis which are globally interlinked. Nature-based solutions (NBS), defined as “actions to protect, sustainably manage, and restore natural and modified ecosystems that address societal challenges effectively and adaptively, simultaneously benefiting people and nature” is part of the solution to these challenges. Here we give a status overview of nature-

based solutions in the Nordic countries, obtained within the S-ITUATION project focusing on 1) what is the current status of research on NBS in the Nordic countries? 2) what policy framework(s) exist for NBS in the Nordic countries? 3) what challenges do Nordic countries experience in the process of mainstreaming NBS? 4) what key examples of projects implementing NBS exist in the Nordic countries? We have done this using several approaches: 1) a review of the academic literature, providing insights on the status of research on NBS in the Nordic countries; 2) a grey literature review in each Nordic country, to describe the policy framework for NBS and practical implementation of NBS projects across the Nordic countries; 3) compilation of a Nordic NBS case projects catalogue, which contains implemented case projects from each Nordic country, using NBS in all major ecosystems: terrestrial (forests and agricultural land), freshwater, coastal and marine, to show the breadth of NBS used in the Nordic countries, 4) Nordic NBS stakeholder consultations. Research on NBS across the Nordics includes several research initiatives. Currently the most central research initiatives are the Nordic Council of Ministers programme on NBS, which is a focused four-year programme. Many Nordic universities and research institutes are also involved in different research projects focusing on or including NBS and there is an exponential interest from researchers in this area. Most of these research projects are targeting NBS in urban areas. In a structured peer-review of scientific publications using the term ‘nature-based solutions’, 64 research papers were

found related to the Nordic countries. These studies varied from large-scale ecosystem-based approaches to small-scale NBS. Most of the studies assessed the NBS functions in relation to biophysical qualities, such as water retention capacity, flood risk reduction, health benefits and biodiversity contribution, but there were also studies focusing on potential economic benefits from NBS. Regarding policy frameworks it is evident that these are at different stages of development when it comes to mainstreaming the concept of NBS into policy across the Nordics. Norway and Sweden have adopted the term to a larger degree than Denmark, Finland and Iceland. Still, all five countries conserve, restore and work actively on developing sustainable use of nature, but use other terms (e.g., ‘blue-green infrastructures or solutions’, ‘restoration’, or ‘ecosystem services’) in their policies and guidelines. NBS governance and implementation is an area that is currently advancing rapidly. At the same time, there are still several challenges as well as also opportunities for using NBS to mitigate and adapt to climate change, protect biodiversity and ensure human well-being. Regarding challenges and gaps, we divide these into 1) natural-scientific and technical knowledge gaps, 2) economic shortcomings, 3) regulatory, governance, and policy challenges, and 4) weak stakeholder collaboration. In the project we have identified 54 key examples of projects implementing NBS in the Nordic countries. Most of these cases were related to freshwater, followed by urban/artificial NBS. The number of implemented NBS projects has increased, especially in the last couple of years. Our key messages and

recommendations for future mainstreaming of NBS are: 1) clear political prioritization is needed to mainstream NBS into policy and practice, 2) appropriate institutional structures, procedures and policy instruments at all governance levels are essential to facilitate the implementation of NBS, 3) better funding structures for NBS are needed, 4) we need to develop common standards, long-term monitoring and better cost-benefit evaluations of NBS, and 5) the knowledge base in all phases of NBS projects needs to be strengthened.

*A Practical Guide to Play Therapy in the Outdoors* May 10 2022 *A Practical Guide to Play Therapy in the Outdoors* responds to the significant and growing interest in the play therapy community of working in nature. Alison Chown provides practical ideas about why we might decide to take play therapy practice into outdoor settings and how we might do this safely and ethically. This book discusses how nature provides a second intermediate playground and can be seen as a co-therapist in play therapy. It explores the relevance of different environments to the play therapy process by considering the elements of earth, air, fire, water and wood. It looks at the way we can connect with nature to find a sense of place and details some activities to do with children in play therapy to get started. The book provides an important guide for the practitioner and talks them through the crucial guidelines that are necessary for outdoor play therapy and gives a philosophical perspective to working in nature. It will be engaging and essential reading for play therapists in training

and practice.

The Centered Mind May 30 2021 Peter Carruthers challenges the central assumptions of many philosophers on reflective thinking and consciousness. He draws on extensive knowledge of the scientific literature on working memory to argue that non-sensory propositional attitudes (such as beliefs, goals, and decisions) are never conscious, and never under direct intentional control.

*Changes in Working Life* Jul 20 2020

*Working with Nature in Aotearoa New Zealand* Nov 16 2022 Working with nature - and not against it - is a global trend in coastal management. This ethnography of coastal protection follows the increasingly popular approach of "soft" protection to the Aotearoa New Zealand coast. Friederike Gesing analyses a political controversy over hard and soft protection measures, and introduces a growing community of practice involved in projects of working with nature. Dune restoration volunteers, coastal management experts, surfer-scientists, and Maori conservationists are engaged in projects ranging from do-it-yourself erosion control, to the reconstruction of native nature, and soft engineering "in concert with natural

processes". With soft protection, Gesing argues, we can witness a new sociotechnical imaginary in the making.

**Working with Nature** Jan 18 2023 Working with Nature - Shifting Paradigms, brings together the science and research supporting an organic, holistic approach to horticulture. This book is a journey into the garden and the world as a whole in ways never likely seen or considered. The author has laid out many of the connections and processes at work when light, air, water, soil and life interact and transform the environment. When working in alignment with nature, many common problems never occur because one is not trying to go outside the natural laws that constrain us all. Instead of struggling to build and control a synthetic environment, one can now identify the existing environmental envelope and work with the natural forces to create and realize horticultural objectives. Once these relationships are seen, so many puzzles will disappear and many mysteries will now "just make sense."
